

The Eye Center

OF SOUTHERN INDIANA

Cataract Surgery 2021

Thank you for choosing The Eye Center of Southern Indiana. Our commitment is to offer you “World Class” surgery in a friendly, warm setting. Thankfully, many patients come to us because their parents did a generation ago. However, you should know that cataract surgery today is different than ten years ago, and very different than a generation ago.

Medical Insurance covers the “Traditional Surgery” as done years ago. Traditional Surgery does not include the kinder, gentler laser surgery that corrects astigmatism. Traditional surgery also does not include the newest lens implants that provide more natural clear vision without bifocal glasses. Medicare and other insurance companies allow you to pay for those upgrades out of pocket since they are not covered by your medical benefits.

Surgical Upgrades

Compared to traditional surgery, these upgrades offer a better quality of vision, less dependency on bifocals and more satisfying surgical outcomes. We encourage you to upgrade and enjoy the added ‘Wow!’ factor that comes with premium surgery.

1. Best Extended Range of Vision Upgrade

- Utilizes the most sophisticated lens available
- Lens brings eye into clear focus for most daily activities
- Includes correction of astigmatism
- Minimizes the need for bifocal glasses
- Laser provides a gentler, more precise surgery
- Additional measurements of the eye during surgery for most accurate lens power selection

Cost: \$2,950 per eye plus Co-Pay, Deductible and Co-Insurance for Traditional Surgery

2. Better Advanced Single-Vision Upgrade

- Laser provides a gentler, more precise surgery
- Includes the correction of astigmatism
- Additional measurements of the eye during surgery for most accurate lens power selection
- Allows control of how you will need glasses
- You will need glasses for distance or near but not both

Cost: \$1,750 per eye plus Co-Pay, Deductible and Co-insurance for Traditional Surgery
